Gino Chen

Software Engineer | AI Agents & Backend Systems | Cornell Tech
+1 646-744-7880 | pc763@cornell.edu | Linkedin.com/in/ginochen | GitHub.com/gino885

EDUCATION

Master of Science in Computer Information Systems | GPA: 4.03 / 4.3 **Expected June 2027**
Cornell University, Cornell Tech - New York, NY

Bachelor of Science in Management Information Systems | GPA: 4.07 / 4.3 (WES 3.89 / 4.0) **June 2025**
National Chengchi University - Taipei, Taiwan

TECHNICAL SKILLS

- **Languages & Backend:** Java (OOP, Spring Boot), Kotlin, Python, TypeScript, Node.js, RESTful APIs, Microservices, WebSocket
- **AI & LLM Systems:** LangGraph, Multi-Agent Orchestration, Tool Calling, RAG, Vector Search (pgvector, ChromaDB), LLM Evaluation (DeepEval), OpenTelemetry, OpenAI SDKs, PyTorch, CUDA
- **Data & Infra:** MySQL, PostgreSQL, Redis, Git, GitHub, Docker, AWS, Azure, Maven, Grafana
- **Frontend & Tools:** React.js, React Native, SwiftUI, Android, HTML, CSS, Pydantic, pytest, JUnit, Postman, JIRA, Agile (Scrum)

PROFESSIONAL EXPERIENCE

Software Engineer Intern | *Google* **June 2026 - August 2026**

- Closed **100% of flagged unauthenticated bypass vulnerabilities** in the upload path by deprecating a legacy proxy and refactoring the **Kotlin** backend to orchestrate authenticated gRPC calls to downstream services directly.
- Eliminated **OOM failures** on large log uploads by streaming zipped archives directly to storage with **Kotlin Coroutine Flow**, **backpressure**, and a bounded **2 MB upload buffer**.
- Split Wi-Fi reports out of a shared connectivity triage queue, implementing a **user opt-in consent flow** with **Android WorkManager** background scheduling and telemetry tracking opt-in health.
- Migrated a legacy service integration to the **official partner API** with **zero downtime**, gating the cutover behind a **config-driven feature flag** that enabled staged rollout and instant rollback.

Software Engineer Intern | *Garmin* **July 2024 - January 2025**

- Built an internal AI chatbot backend with **Spring WebFlux**, **RAG-powered vector search**, and streaming responses, automatically resolving **32% of all IT support tickets** for an organization of **1,500 employees**.
- Integrated an **image-recognition API** into the COO system to detect over **10,000 package origins**, reducing manual verification from eight steps to three through **Jaro-Winkler similarity**.
- Implemented secure **RESTful APIs** with **JWT-based role-based access control**, and automated migration of **20 years** of review data using **Python** and HTML parsing.

TECHNICAL PROJECTS

Syncinerary | *Python*, *FastAPI*, *LangGraph*, *OR-Tools*, *PostgreSQL/pgvector*, *Redis*, *SwiftUI* **March 2026 - Present**

- Built a **LangGraph travel agent** for social discovery and human-approved replanning; moved discovery to **checkpointed PostgreSQL workers**, completing a live **16-card run after client disconnect**.
- Improved worst-case **meal coverage from 62.5% to 100%** across 12 storm-scenario test runs by modeling meal availability in a **two-stage OR-Tools CP-SAT solver**, with LLMs excluded from feasibility decisions.
- Hardened LLM tool calls with **Pydantic validation, repair, loop detection, and cost caps**; added **OpenTelemetry** traces and **10-scenario deterministic CI evaluations** to detect constraint regressions.

NCCUPass | *Python*, *FastAPI*, *MySQL*, *Redis*, *Docker* **March 2025 - November 2025**
Google Developer Student Club, an NCCU campus assistant

- Developed a campus assistant platform for **2,000+ registered students** by containerizing search microservices and deploying a **FastAPI** backend integrated with **MySQL** and **Redis**.
- Built a **BM25-based search engine** with **jieba tokenization**, and reduced Search API latency by **34%** via **Redis caching**, monitoring **P99 latency** on **Grafana**.

WellNest App | *Java*, *Spring Boot*, *ChromaDB*, *BERT*, *XGBoost*, *OpenAI API* **September 2023 - December 2024**

- Achieved **third place among 16 teams** in the **NCCU Graduation Project Competition** for an **AI-based mental health companion** integrating NLP and emotion recognition.
- Created a real-time chatbot using **Spring WebFlux** and **Server-Sent Events** with a **fine-tuned GPT-4o mini model**, backed by a **RAG pipeline** using **ChromaDB** and **BERT & XGBoost** for emotion classification.
